Is investing in REVROUND safe?	29

Few words from CEO

Dear Investors.

At the beginning there is always an idea. It is the most important part when a project is created, foundations are laid for an activity and strategies are created for the following years. It has to be clear, innovative and to bring an additional value to a customer. It is also a seed which should give a high yield. However, every seed which is thrown into a soil without a thought could get spoiled, no matter how strong it is. This is the reason for preparing the environment for its growth properly.

REVROUND is not only an idea to fulfil a certain gap in the market by creating a tool which can make a transfer between different environments easier and faster. It is also a deliberately and carefully prepared **surREVROUNDing** for growing and people, whose knowledge and experience should make this project the big success.

We all have seen companies and projects which were not able to cope with the reality despite a great idea they had been built on. We could also observe start-ups that collected astronomical sums of money to make their projects work and were never been able to make a profit based on their products or services.

During their very short lifespan, cryptocurrencies have already shown their market potential creating a completely new space of the market in a matter of only few years. This market needs a different approach than existing markets and industries. Being able to view the reality out of the box is a key factor to be successful – both in case of **REVROUND**, our Customers and Investors. Based on **REVROUND** philosophy all of these entities are equally important for the project to be successful.

Due to all the above, **REVROUND** main strategy is a long term development based on a clearly defined plan created with experience that have been gathered to date by the Team and on a feedback from the Market and the Community.

The first step for a successful project is to prepare a valuable plan which has to contain all the elements that can make it work. The second step is to gather all the assets properly to create a strong foundation for the actions planned because this only can pay off later on. The third step of development is to be supported by experienced and devoted Team with a vision of

creating things that are unique. The kind of Team which is not afraid to take a risk and to be challenged by unknown obstacles. The description of all the above is in the document below, ready to be implemented and executed. It is up to you whether you will find it trustworthy.

My main task in the project is to show the direction in which **REVROUND** will go and lay all the foundations for the whole idea. Due to this I will provide safety for our Investors and Customers' funds now and in the future. Stability and safety therefore will provide stable growth to all of these who are gathered **aROUND** the project.

I am honoured to invite you to be a part of this project.

Łukasz Bartoszek

CEO

I. Introduction

Constant development of different blockchains and cryptocurrencies emerging in their **surROUND**ings allows new projects to grow constantly. Diversity and competition between different chains positively influence the quality of services provided by emerging start-ups, giving the ability to choose between different visions. Thanks to that customers can vote for the most valuable ones using their funds. Every year new chains and other projects are introduced and they offer more and more quality services. It seems obvious that we should be allowed to move easily inside a particular chain and between all of them alike. The first possibility is provided by projects that are created for exact environment and cooperating within one blockchain. However, when we want to change the chain and invest our assets in another project on a different blockchain, we have to either use a bridge between them (which most likely does not exist) or use an exchange. The first problem is obvious. The second one is, most of the time, in fees which are quite high. Then, when we want to pay for some products or services or just go to FIATs for whatever reason, fees pile up to a point which might consume our whole profit. Sometimes we even have to make a few transactions just to go from one stable coin to another. It does not seem very efficient, does it? And this is the point where **REVROUND** comes to help.

As we could see so far, cryptocurrencies have a big potential just waiting to be released. Thanks to blockchains many valuable projects have been set up and are being integrated with our lives in the very moment.

The market of electronic payments has become very lucrative even despite its early stage. It is being noticed by major companies all **aROUND** the world – the ones that have not looked in that directions so far. Due to that fact we can see that the dynamics of cryptocurrency market is big and we can expect it will be even bigger in the future. Nevertheless, the most important factors for choosing one chain to another are their adaptive capabilities and safety, especially in comparison to existing solutions.

Cryptocurrencies and blockchains have been, without any doubt, a technological breakthrough. High volatility on this market and still limited stability due to its development

phase should not be a matter of concern. Every new technology of the past was at this point and naturally matured in time. There is going to be no difference in this case. Also, it needs to be pointed out that well managed projects can be foundations for stable and highly profitable companies of the future. That has been said, main goal of **REVROUND** is to provide modern, easily adaptable tool which can reduce any flows of the blockchain industry, but also taking an advantage of all of its benefits at the same time.

II. Idea of **REVROUND**

As it was mentioned previously, the high number of blockchains makes moving assets between them harder and, as a result, it may cause to lose some opportunities we can step upon. These hardships are also present when we want to exchange cryptocurrencies and FIATs. Sometimes we are forced to make more than a few actions, including switching exchanges and wallets, just to buy or sell certain assets, take part in providing liquidity or staking. Then we are forced to make the same actions all over again when we need to go back to the point of origin. These actions are dreadful, time-consuming and often frustrating. To make all of these easier we created **REVROUND** – ultimate **ROUND**about for moving assets between different blockchains, exchanging stable coins to FIATs and vice versa or making payments for goods and services.

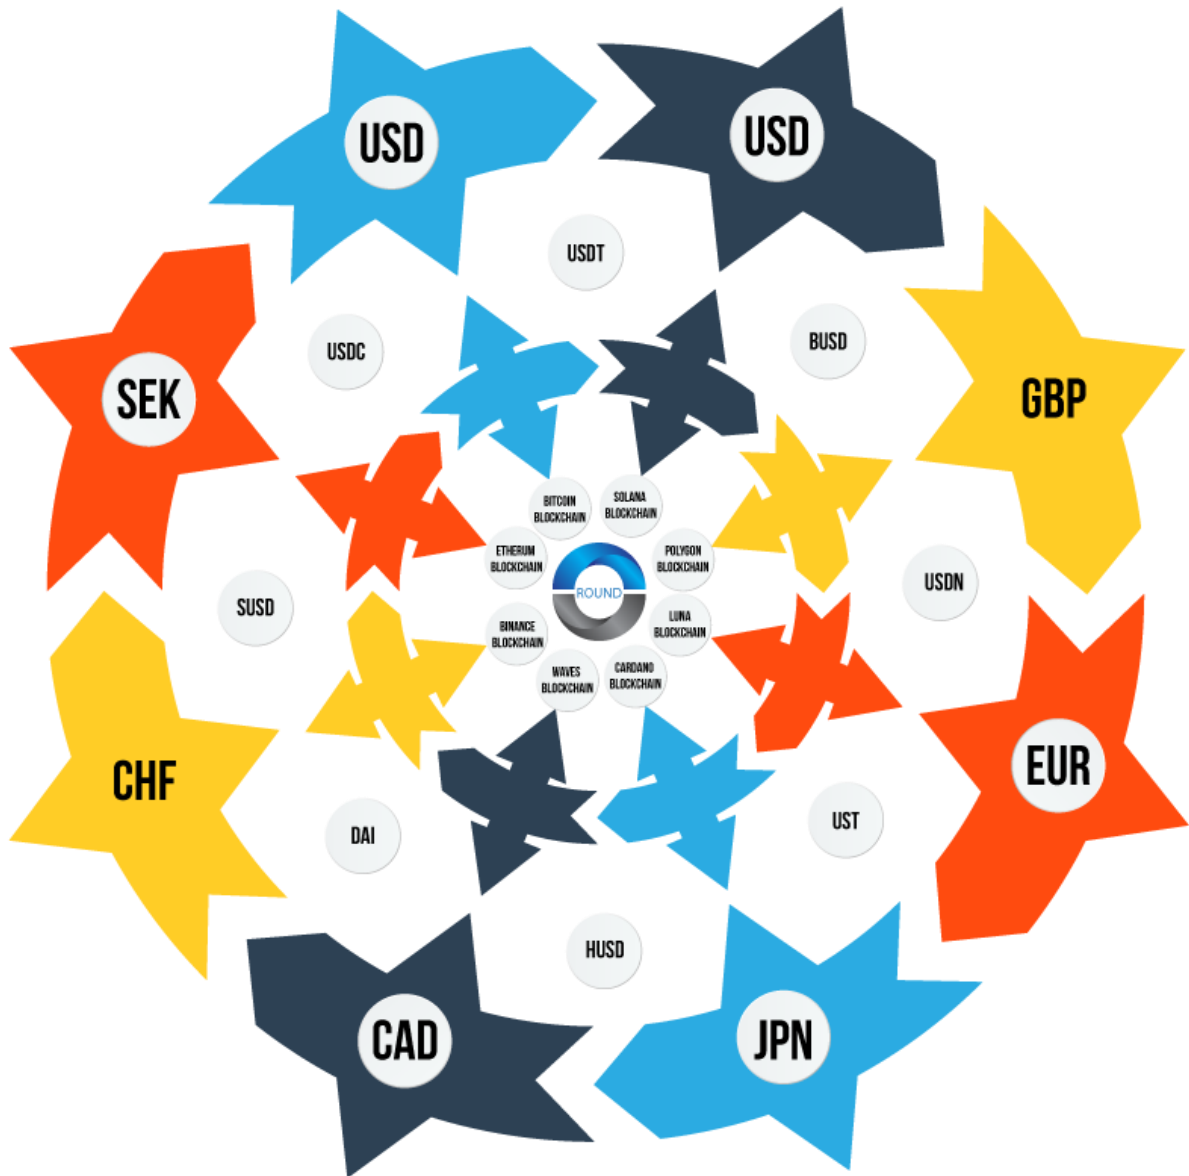

willing to make a transaction within **REVROUND** ecosystem. The price is going to be calculated based on exchange prices of National Banks, so the spread between them is going to be very small. However, it is going to be profitable for both parties mainly because of a volume and low costs which are going to be incurred on both sides. To lower the risks **REVROUND** is going to provide their own transfer accounts as a middle way between the parties. It is going to be safer way, although it is going to take a little bit longer to finalize the transaction. In the first case assets are going to be blocked on users wallets to avoid frauds until both parties confirm the transaction.

Having a wallet for **REVROUND** within different blockchains is going to allow integration of different stable coins in one ecosystem as well. Thanks to that there is going to be a possibility to implement a transfer service based on NFC that will allow to move assets between **REVROUND** users easily and quickly. It will surely be the first step for offering stable coins payments for customers and companies all **aROUND** the world – both on the Internet and in physical shops. Moreover, there is going to be a service implemented that is going to automatically convert outgoing assets to that which are wanted by the receiver.

Thanks to all the above **REVROUND** will bind not only different blockchains but also allow to use cryptocurrencies in everyday life. And it will make it easy.

Picture 2. Operation scheme of REVROUND.

III. Why is REVROUND going to change the World?

REVROUND is an innovative, globally unique and the very first project which is going to try to bind this what has been parted. As a result, **REVROUND** will revolutionize our understanding of means of payments and at the same time deliver many intelligent, creative solutions working in a contact point between two worlds – traditional and cryptocurrencies markets. In

exchange users are going to get a tool that is going to make their interactions with various currencies, coins and tokens simpler, faster and less frustrating.

REVROUND support freedom of choice, individualism of a person and is going to help its users to make sensible choices, letting them to vote for valuable projects with their wallets. With a little help from **REVROUND** people are going to make choices that make sense for them, motivate them and the market to a constant development. The freedom that is given by the ability to choose a way of payment is going to cause a free flow of assets. **REVROUND** will be, for sure, an exacting option for those who cherish challenges, look for simple solutions and opportunities to make profits and support financial freedom. This project will also be a fantastic opportunity for all those who are interested in global economy and financial flows in the world.

IV. Why is **REVROUND** price going to rise?

REVROUND main principles are to give the possibility to move financial assets between blockchains and users from different parts of the world easily and safely. Simplicity and low costs are main incentives to use **REVROUND** and it makes investing in **REVROUND** even more profitable. Moreover, the amount of assets flowing through **REVROUND** will certainly cause increase in value of **REVROUND** itself. In addition, avoiding as many intermediary organizations as possible will also lower the maintenance costs of the whole project. This strategy is prepared to make **REVROUND** as sufficient as possible.

Despite the fact that most of the tokens nowadays is burnt to increase their value, it is not going to happen with **REVROUND**. We think that these kinds of actions are pointless and forced by the desire to lower the supply in an artificial way. The exact same effect can be obtained with smart managing of the supply and the demand of the token and issuing tokens to the market in portions due to increasing demand. For example, when the value of **REVROUND** will go up by 50%, 10% of tokens will be put into the market.

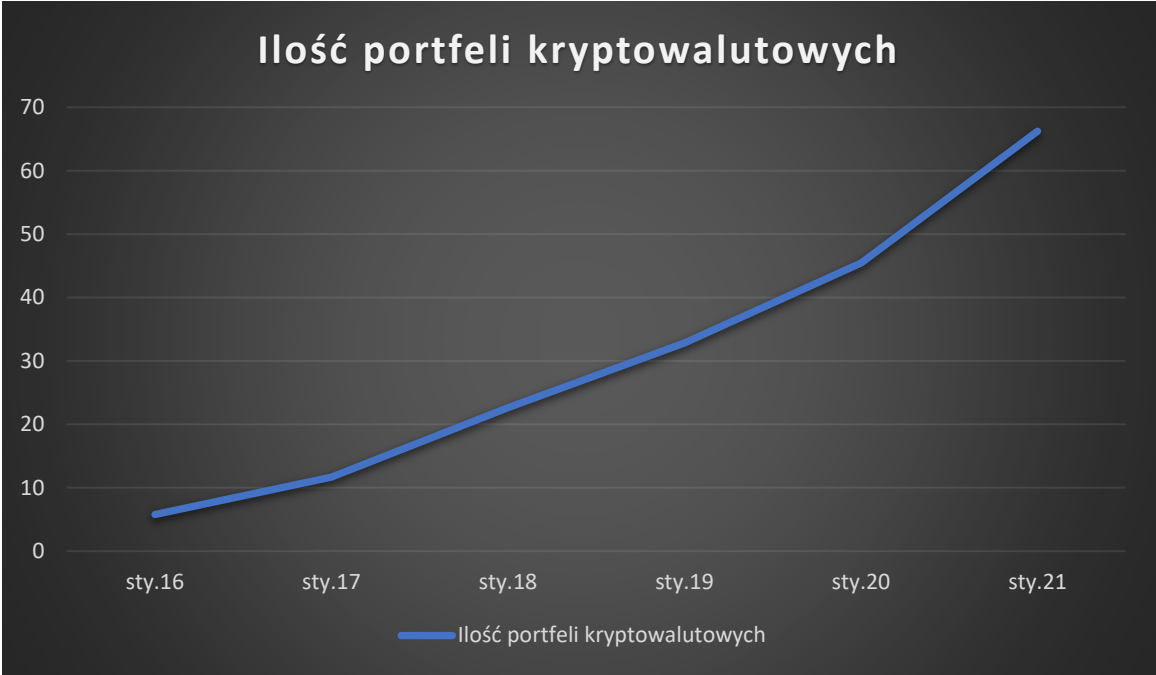

We have also prepared a special surprise for our investors. Everyone who will buy **REVROUND** tokens will have an opportunity to buy a golden collectible coin worth 2000 USD, coined purposely for the occasion in the amount of 99 coins.

V. Cryptocurrencies are a very important investment asset

If you are interested in investment opportunities, new technologies and changes in the world economy you have probably noticed information circulating in media about cryptocurrencies, tokenization and blockchains. The information is present more and more in the mainstream media and is growing in people's minds. Cryptocurrencies are not a toy for small group of enthusiasts any more as it has been before, but they represent real value... in the virtual world. One may even risk a statement that crypto revolution is similar to that what created the Internet. This bold assumption can be made mainly because we are at the beginning of a change we think and operate right now.

It can also be stated beyond any doubt that crypto market is changing and in the same time growing dynamically and it will be doing it in the future. The number of people using crypto wallets was around 77 million in October 2021 and it is on the rise. It may not seem so impressive as a number of debit card holders at the same time was much higher. Only Visa had 1.749 billion its cards worldwide in the fourth quarter of 2021. Nevertheless, it has to be taken under consideration that in January 2016 there were 5.78 million people using crypto wallets which is about 10% of their number today.

Picture 3. The number of cryptocurrencies wallet holders 2016-2021. Source: Statistica.

Also, the amount of money being transferred to cryptocurrency exchanges is changing. In October of 2021 market cap for crypto was 2.7 trillion dollars, rising by about 30% since the beginning of 2021. It is obvious that it is changing due to still growing number of investors – both private and institutional. It is also worth mentioning that more and more countries are starting to adapt their monetary systems to use blockchains in their transactions.

VI. Why is **REVROUND** unique?

REVROUND is unique because it merges, and not divides. In **REVROUND** we have been able to integrate all the crypto market benefits like decentralization and safety of a transaction with regular financial markets. Thanks to **REVROUND** fees for transactions between crypto market and FIATs are going to get lower and at the same time the way to exchange them is going to get simpler. The simplicity and low costs are the factors though that may enable more people to get inside the world of cryptocurrencies, merging present economy with the future. For the community of **REVROUND** it is going to be a way to use unused assets and to provide faster development to the whole blockchain idea through unification of all stable coins – now and later on. It has to be pointed out that it is obviously going to be profitable for the society to provide liquidity to **REVROUND**.

REVROUND has created a token which is planned to be launched on decentralized exchanges like Pancakeswap, Uniswap and others – just to make it easier for our users. Our token is not, in comparison to other existing cryptocurrencies on the market, deflationary because we do not see any sense in rising its value in artificial way. The price is going to be regulated by supply and demand only and part of the profit from **REVROUND** activities is going to be designated to buy **REVROUND** tokens back from the market. They are going to be used as rewards for staking and liquidity providers.

Every transaction is going to include a fee in amount of 0,1% on both sides (0,05% for staker and 0,05% for **REVROUND**, because we believe in equal share for both parties) and this fee is a foundation of **REVROUND** economy. These fees do not include exchange charges as it is with debit and credit cards nowadays due the fact that there is no such operation with **REVROUND**. The fee is charged in a stable coin that is used during the transaction and then distributed among stakers and liquidity providers. This way **REVROUND** is not going to be affected by the price of its token, should it go up in the future. Moreover, there are no plans to create a new stable coin by **REVROUND** for the time being and, as it is mentioned above, the fee is going to be charged in a coin that is used in a transaction.

VII. What problems may **REVROUND** fix?

Everyday shrinking world causes the situation where transfers of assets between people and companies (not only within one country, but globally) are on the rise. A need for fast and safe transfers with low costs between monetary system users is also growing exponentially nowadays. These problems are especially visible between two markets, cryptocurrencies and FIATs, where exchanging one into another is costly and not always easy – from a regular person’s point of view of course. It is also clearly visible that there have been a traditional markets mirroring in crypto market with all the different assets. Tokens and coins and their exchange is also sometimes difficult and it needs a few bridges for these exchanges to be finalised with a couple of fees along the way. This kind of action rises costs of a transaction and it also rises the probability of a mistake being made. Thanks to **REVROUND** this kind of operation can be made in one place with costs significantly lowered.

VIII. Why will **REVROUND** support blockchain economy?

It has been over a decade since the first blockchain was created and during that time a lot more chains that supposed to be better, faster, more reliable has been created. Currently there are dozens of them and most of them have separated ecosystems with different stable coins. Thanks to **REVROUND** the transfer between those chains are going to be faster and cheaper, making investments in valuable projects easier than ever. Projects like **REVROUND** for example.

IX. Community of REVROUND

Every member of **REVROUND** community is going to have a possibility to be involved in the project and be a part of its success. Every one of us has a moment in life when there are unused assets in our wallets, staying in a bank account or in cash. By joining **REVROUND** you make these assets work for you when they are not used and in the same time you help other members of **REVROUND** family providing the liquidity. It is a win-win situation. In opposite to current banking there is not going to be a middle man taking most of the profits from transactions. The idea of **REVROUND** says that a member of the community is as important as **REVROUND** itself and because of that transaction fees are going to be split evenly. Thanks to this business idea not only costs are going to be reduced but also structure and management of the project is going to be simplified.

X. Presentation of REVROUND

REVROUND is a project based on an idea of managing different stable coins. **REVROUND** token is designed to provide liquidity to the whole project and it can be used as an investment asset as well. It is going to let the holders to achieve high and stable profit from their investments by staking and providing the liquidity to it.

REVROUND development has been divided into a few implementation phases.

Phase I: Launching **REVROUND** token

Phase II: Building a connection between different block chains

Phase III: Initiation of a connection between stable coins and FIATs

Phase IV: Implementation of full payment possibility for stable coins via NFC

Every phase is going to bring new values to the whole project and deliver different ways of financing it with additional profits for our investors. Majority of the assets is going to be used to expand to other blockchains, traditional markets and to make technological advance within the project. Moreover, huge amount of the assets is going to be designated to buy stable coins to provide liquidity to the project in its starting phase. Rest of them is going to be held as a spare asset and invested in other cryptocurrencies (BTC, ETH, DOT, SOL, LUNA, ADA etc.)

The max supply of **REVROUND** is going to be 100 000 000 tokens.

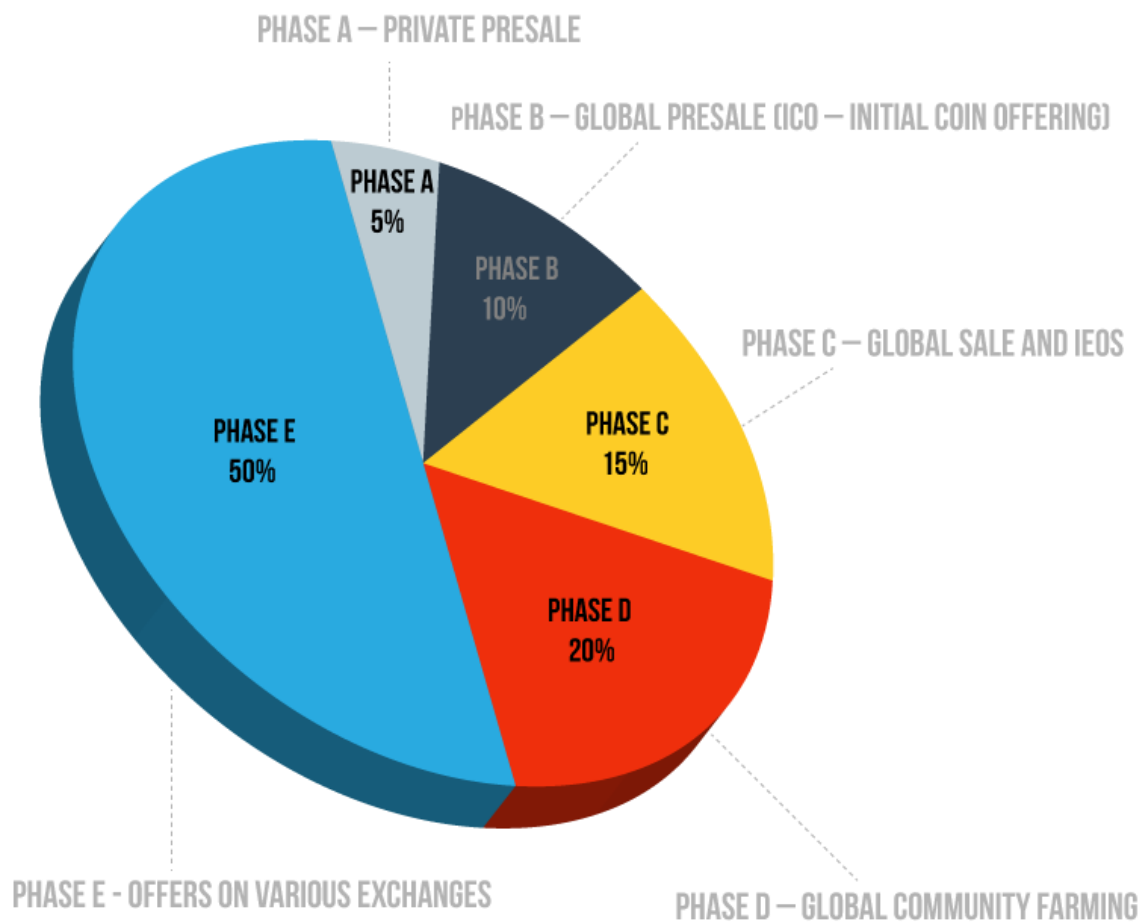

XI. Information about the sales of **REVROUND**

There is going to be 10 000 000 **ROUND** tokens in the offer and they are going to be available in a public sale in a few rounds. If all the tokens for every round are not sold, they will be transferred to a backup wallet to help economy of **REVROUND** later.

- Token name: **REVROUND**
- Token short form: **ROUND**
- Token standard: TBD
- Blockchain platform: TBD
- Base price: 1 **ROUND** = 1 USD
- Address of smart contract: TBD
- Target for the final stage during sales: 10 000 000 USD

Phase A – Private presale

Date: 1 April 2022 – 1 May 2022

Price: 0,25 USD

Soft cap: 125 000 USD (500 000 Tokens)

Hard cap: 500 000 USD (2 000 000 Tokens)

Min/Max investment in a private presale: 500/40 000 USD

Distribution: 15% at TGE, linear vesting for 6 months

ROUND token delivery: tokens can be claimed on **REVROUND** or Partners' websites

Phase B – Global presale (ICO – Initial Coin Offering)

Date: 1 May 2022 – 1 June 2022

Price: 0,50 USD

Soft cap: 250 000 USD (500 000 Tokens)

Hard cap: 1 000 000 USD (2 000 000 Tokens)

Min/Max investment in a global public presale: 500/100 000 USD

Distribution: 10% at TGE, 3-month cliff, linear vesting for 9 months

ROUND token delivery: tokens can be claimed on **REVROUND** or Partners' websites

Phase C – Global Sale and IEOs

Date: 1 June 2022 – 1 July 2022

Price: 0,75 USD

Soft cap: 375 000 USD (500 000 Tokens)

Hard cap: 1 500 000 USD (2 000 000 Tokens)

Min/Max invest in a global public presale: 500/40 000 USD

Distribution: Immediate

ROUND token delivery: tokens can be claimed on **REVROUND** or Partners' websites

Phase D – Global Community Farming

Date: 1 August 2022 – 1 November 2022

Price: 1 USD

Soft cap: 2 000 000 USD (2 000 000 Tokens)

Hard cap: Rest of the tokens (max 9 250 000 Tokens)

Min/Max investment in a global public presale: N.A.

Distribution: 10% after the end of the farming, 3-month cliff, linear vesting for 9 months

ROUND token delivery: tokens can be claimed on **REVROUND** or Partners' websites

Phase E - Offers on the various Exchanges

Uniswap/Pancakeswap: 4-6 weeks after Global Sale is finished

Other Exchanges (centralized and decentralized): ASAP

Soft cap: 3 750 000 USD (3 750 000 Tokens)

Hard cap: 5 000 000 USD (5 000 000 Tokens)

Min/Max investment in exchanges sale: no limit

ROUND token delivery: exchanges

Economy of Funds:

All the funds gathered in all the sales are going to be transferred in portions to buy cryptocurrencies assets, paid developing costs, team salaries, project maintenance and marketing expenditures.

Cryptocurrencies assets:

BTC, ETH, SOL, LUNA, ADA and other promising coins are going to be staked to get passive income.

Stable coins are going to be used to provide liquidity to the project and staked in different DEFI projects if needed.

XII. Roadmap

Q1

1. Finalizing the concept of the project
2. Creating the team
3. Consulting with experts and advisors
4. Creating **REVROUND** webpage
5. Starting marketing actions
6. Legalization of the company
7. Starting Private Presale
8. Starting Global Presale
9. Taking part in cryptocurrencies events

Q2

1. First phase of creating assets
2. Transferring assets to get passive income
3. Getting into new strategic partnerships
4. Alpha version of the mobile app
5. Assets staking
6. Preparing community farming app
7. Adding **REVROUND** to Coingecko, Coinmarketcap etc.

Q3

1. Launching Beta version of the application
2. Implementing banking futures into the application (Fiat<>Crypto)
3. Registering an account on various exchanges
4. Developing automatization for applications
5. Developing extensions for **REVROUND**
6. Launching final version of the **REVROUND** mobile application
7. Listing on Uniswap, Pancakeswap, etc.
8. Showing an Alpha version of the integrated mobile wallet and browser extensions

Q4

1. Marketing campaigns on various platforms
2. Further automatization of **REVROUND**
3. Starting marketing actions for Institutional Clients
4. Further expansion of the staking application

5. Automatic dividends
6. A Beta version of the wallet and an alpha version of the peer-to-peer payments (ability to transfer assets between wallets on mobile devices – IOT)
7. Preparing a Roadmap for the next year

The Roadmap for 2023 is going to be prepared at the end of 2022 and it is going to be based on the phase of the project itself and the needs caused by market fluctuations and technological changes.

XIII. Launching **REVROUND** tokens

Rules of token launching

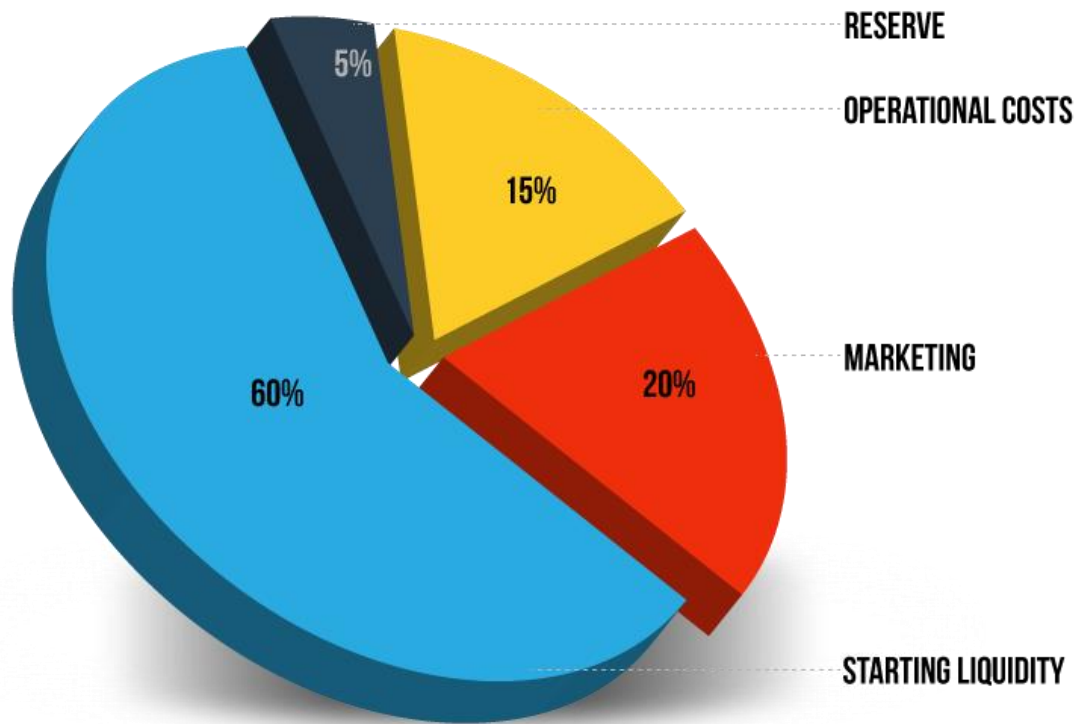

Private Pre-Sale of **ROUND** tokens is going to take place before official campaign called Public Pre-Sale. Public Pre-Sale is going to take place on exchanges and throughout launching sites whereas Private Pre-Sale is going to be directed to the members of the team and cooperants throughout various distribution channels. Private Pre-Sale is going to be available for the community in bundles on the project website.

The rest of the tokens designated for sale during this phase is going to be made available throughout different channels on various blockchains.

Tokens distribution

SALES PROFIT DISTRIBUTION

The tokens issued for **REVROUND** itself are going to be divided into two parts. The first part, in amount of 50 000 000 **ROUND**, is going to be put on the market for sale and assets from this sale are going to be used to cover operational costs of the project. They are going to be used in a way as below. The hardcap is 10 000 000 and softcap is 50 000 000 tokens in this case.

60% of the sold assets in all the phases is going to be used for providing starting liquidity to **REVROUND**. The whole sum is going to be evenly divided and exchanged for stable coins on different chains which can fulfil all the needs for liquidity at the beginning of the project.

Further liquidity is going to be risen by the community involvement and from the platform fees. Should there be no enough liquidity, it will be provided from backup assets.

Another 20% of assets gathered is going to be spent on marketing during the starting phase. It seems like a lot, although **REVROUND** being a multichain project and it also being global has to be taken under consideration.

Next 15% is going to be spent on operational costs of **REVROUND** and another 5% is going to stay as a reserve in case of unpredictable situations.

Distribution of the tokens owned by **REVROUND**

The second part of the tokens owned by **REVROUND** is going to be divided as mentioned below.

50% of the tokens from **REVROUND** pool is going to be put aside as a backup and it is going to be released systematically during the development of the project to maintain the liquidity.

20% of the tokens is going to be given to the Team. 25% of these tokens is going to be realised after a year since the project official launch and the rest is going to be transferred to the Team in tranches for 5% at a time every month till all of them are gone. Allocation of that kind is going to assure the full devotion of the Team during the development phase and beyond.

10% of the tokens is going to be designated for advisors and influencers who are going to inform their viewers about the project.

XIV. Q&A

When is the project going to be ended?

Some of the main objectives for the project are stability, scalability, adaptability and being easy to develop. Based on all above the project will last as long as there will be need for its services.

In what way will **REVROUND** be managing its funds to increase its value?

The main rule for **REVROUND** is to provide easy way to exchange stable coins and build a **ROUND**about for them and FIATs. Value of the token is going to be regulated by **REVROUND** services being used by its customers and the fees provided by these services. These assets are going to be transferred, partially, into liquidity of **REVROUND** and the rest of them are going to be used to invest in other valuable projects as well as they are going to be spent on buying **REVROUND** tokens back.

What kind of partnerships are planned by **REVROUND**?

There are plans to make partnerships with every possible partner on the market. Taking under consideration the idea that stands behind **REVROUND** all companies, projects and individuals are welcome to use **REVROUND** apps to make transfers of their assets easy. **REVROUND** is going to cooperate with small knick-knacks sellers as well as big companies, responsible for millions of dollars' worth of assets. **REVROUND** in its core is utilitarian.

Can I use my **REVROUND** tokens to pay for goods and services?

There is a possibility to do that. It depends on a service provider or shop. However, the main idea for **REVROUND** is to be used as a liquidity and investment asset for its applications.

When will there be a possibility to withdraw my assets from **REVROUND**?

REVROUND will provide the possibility to withdraw the assets from staking and liquidity pools within maximum 3 days. If there are enough assets in pools and stakes, there will be possibility to claim the assets immediately.

When can I claim my rewards for providing liquidity?

All the rewards will be added to users' accounts automatically increasing their assets and rewards from staking and liquidity alike. Thanks to that all the assets stay in circulation of the project and liquidity providers will benefit from a compound interest. **REVROUND** is all about efficiency – both for the customer and for the community member.

Where can I sell **ROUND** tokens?

You will be able to sell your tokens on various exchanges and on the **REVROUND** application directly.

Where can I buy **ROUND** tokens?

At the beginning you are going to be able to buy **ROUND** tokens on different listings and on various exchanges. There are going to be a few sale **ROUND** tokens for which there is going to be a special price set.

How is **REVROUND** going to be financed?

REVROUND is going to be financed from fees.

Is investing in **REVROUND** safe?

Telling the long story short – yes, it is. And here is why. Investing in **REVROUND** is a form of allocation of your assets in a new, fresh project on a cryptocurrencies market. The project has an excellent team of professionals that can take care of its safety. Moreover, its foundations are an attractive business model and know-how which allows to think about the future and development peacefully. There are, of course, some threats although they are going to be reduced to minimum during the project implementation.
